

# CONSISTENT CONDITION DATA COLLECTION FAQs

June 2025

## **When will I get my data – will you send it to me?**

The data will be uploaded to Thinkproject's AWM software by the CCDC team. RCAs will receive an email from REG when their data is available, together with quality assurance documents.

## **How do I find my data in RAMM/AWM?**

New Asset Management Data Standard-compliant high speed data (HSD) tables are available in AWM to hold the CCDC data. These tables replace the historical HSD tables, and each RCA will be provided with guidance documents explaining the structure of the AWM table (also available on the AMDS website).

## **Have you collected data for every sealed road?**

The network surveys have been carried out in accordance with the plan agreed between the CCDC team and your RCA. Surveys have been completed on all high class roads (major collectors and above), and at least 50% of low class roads. In rare circumstances there are small parts of the network which were not surveyed, for example due to road works, restricted access or environmental damage.

## **What do I need to do for my end of year reporting?**

There is no change to the end of year reporting requirements or processes.

## **What happens if there is a sudden trend change in my data?**

The CCDC programme has standardised the survey equipment with the use of LCMS2 laser technology and has introduced a comprehensive quality assurance regime for checking and approving data prior to handing over to RCAs. It is likely that the new data shows a trend shift compared with older data, partly because of the standardisation and quality improvement.

## **Will the metrics stay the same for Smooth Travel Exposure (STE)?**

The Smooth Travel Exposure (STE) reporting method for the 2024/25 financial year remains unchanged from previous years. Once the CCDC data is available in your AWM system, the STE result should be generated using the usual method via AWM.

## **What quality assurance documents will I receive from RAMM?**

The network survey data is quality assured using a specifically designed CCDC Data Validation Tool. Following this quality assurance, a global summary of the survey and the data across the survey attributes (roughness, rutting, geometry, texture, cracking) is provided. A copy of the calibration and validation certificate of the survey vehicle used on your network will also be provided.

## **How can I access the video data?**

Video data will be uploaded into Argonaut's Roadrunner video platform. Access to videos will be arranged by Argonaut and RCAs will have free access to their video data for six months. RCAs will then have to arrange a subscription with Argonaut - contact the team at [info@argonaut.nz](mailto:info@argonaut.nz)

## **Why have some RCAs not received their data by 30 June?**

There have been a few issues in the first year of nationwide surveys (technical, weather-related etc) that have caused delays to data uploads in a few regions. REG is working directly with the affected RCAs to minimise the impact on reporting.

## **If the data is late, what do I need to do for my end of year reporting?**

Most RCAs will have data uploaded to AWM before the end of year reporting deadlines, but some RCAs will experience delays in receiving their data. The REG team has confirmed with the Office of the Auditor-General and NZTA Investment Advisors that data availability by end of July is acceptable for RCAs to finalise reporting.
