

Construction

The Maungatapu underpass will operate under a Design and Construct (D&C) contract.

D&C is a project delivery model that the Transport Agency uses to deliver complex projects. Under this contract model the D&C team (usually a consultant and contractor partnership) is selected through a competitive procurement process.

Who is building it?

Following a nine month tender process, Fulton Hogan successfully won the contract to construct the new underpass. Teaming up with Bloxam, Burnett and Olliver (BBO) and Tonkin and Taylor (T&T) an innovative design and competitive tender helped them win the contract.

The D&C model encourages innovation and will provide the best value-for-money on this complex project.

Beca are the Transport Agency's Principal's agent on the project.

Traditional vs Design and Construct process
