The Memorial Park Alliance underpass site and office will be closed from Saturday 21 December for two weeks and will re-open on Monday 6 January.

Security guards will monitor the site throughout this period.

Automated pumps with muffled generators will operate as required to remove groundwater and stormwater from the site into the sediment tanks.

The route to and from Massey University, the National War Memorial and HMNZS Olphert via Tasman St will be a two-way system during the break with no traffic lights or wardens. Please proceed with caution.

Should you have any concerns about the site, please call our Freephone 0800 020 086. We have personnel available to attend to any issues.

Site closed for Christmas and New Year

The Memorial Park Alliance team wishes everyone a safe and happy festive season.
Concrete pours for underpass floor slab

An intricate network of steel reinforcing is required for the 800mm thick floor slab for the underpass.

Each 10m of floor slab requires up to 150m$^3$ of concrete poured at regular intervals over a period of several hours at the coolest time of the day.

The concrete team levels and smooths the concrete to a high standard in preparation for the asphalt road.

**Concrete pours in early 2014**

One concrete pour for the floor slab will take place during the week starting 6 January 2014. The day is yet to be determined.

In the following weeks, pours will take place twice a week, most likely Tuesdays and Thursdays. While there is some noise associated with trucks and machinery, we have arranged with the concrete supplier to keep noise to a minimum. Trucks will enter the site from the State Highway side of the site.
