

Takitimu North Link

Changing the way we move

Stage One

The Takitimu North Link Stage One project is not just about building a road, it is about connecting communities and providing better and safer choices for people to move about the region.

A 6.8km continuous and separate shared path will provide a safe and efficient connection for people cycling, riding e bikes, electric scooters, electric skateboards and walking.

The path, connecting the Kopurererua Valley to Te Puna, will be built on the north side of the road, and provide regular access points to local roads and points of interest including Hakao/Minden Gully and the Wairoa Awa (River).

It will provide better transport choices, as well as opportunities for people to access and appreciate the beautiful environment we live in, and to learn about the rich archaeological and spiritual significance of this whenua.

The completed path will provide a cultural journey experience, with connections to cultural landscape features, and cultural artwork representing the seven hapū across the Takitimu North Link Stage One project area.

The shared path will become an important part of Tauranga's transport network, which links Bethlehem and The Lakes to the CBD and Cameron Road.
