

SH10 WAIPAPA IMPROVEMENTS

THE PREFERRED SOLUTION

The preferred option for the SH10 Waipapa Road intersection is a single-lane roundabout and an extension to Klinac Lane.

Installing a roundabout reduces peak time congestion and vehicle queuing and makes it easier and safer for vehicles to turn right from SH10 and right out of the side roads (Waipapa Road and Waipapa Loop Road).

The proposed roundabout design and speed limit review will assist in slightly slowing State Highway traffic through the Waipapa township, making it safer and more appealing for pedestrians and cyclists.

Further improvements to the intersection can be included to promote and support active modes of transport and improve connectivity between Waipapa businesses and community on either side of SH10 and the local roads either side, whilst ensuring that SH10 remains an efficient through route.

The roundabout option will help integrate the transportation network with activities in the township, facilitating the economic growth and improving connectivity for the Waipapa and Kerikeri communities.
